

You are invited to attend a meeting on  
Institutional Adaptation to Climate and Water Stress in Saskatchewan  
at the Conexus Arts Centre  
200 A Lakeshore Drive Regina, SK

On

**Thursday, November 26, 2009  
10:00 a.m. to 4:00 p.m.**

Lunch will be provided

Scientific research highlights that the climate is variable and undergoes changes over time. Communities, agriculture, industry, economic activities and the environment are all sensitive to variations and fluctuations in the climate. In the future these variations may be more pronounced and require different institutional mechanisms. The Institutional Adaptations to Climate Change (IACC) project is a multidisciplinary research initiative focused on rural community vulnerabilities to climate and water-related stresses in the South Saskatchewan River Basin and the capacities of governance institutions to reduce community vulnerability.

This meeting consists of presentations of the IACC project's main research findings, and provides a forum for discussions surrounding institutional strategies for dealing with climate and water stress in Saskatchewan. Your presence, participation and insights would be greatly appreciated.

**Please RSVP to [Monica.Hadarits@uregina.ca](mailto:Monica.Hadarits@uregina.ca) by Friday November 20, 2009.**

**N.B.** Please enter through the Schumiatcher Entrance (southwest door). There will be signs posted to direct participants.
